HCL AI Data Advisor

Advanced anomaly detection and problem prevention

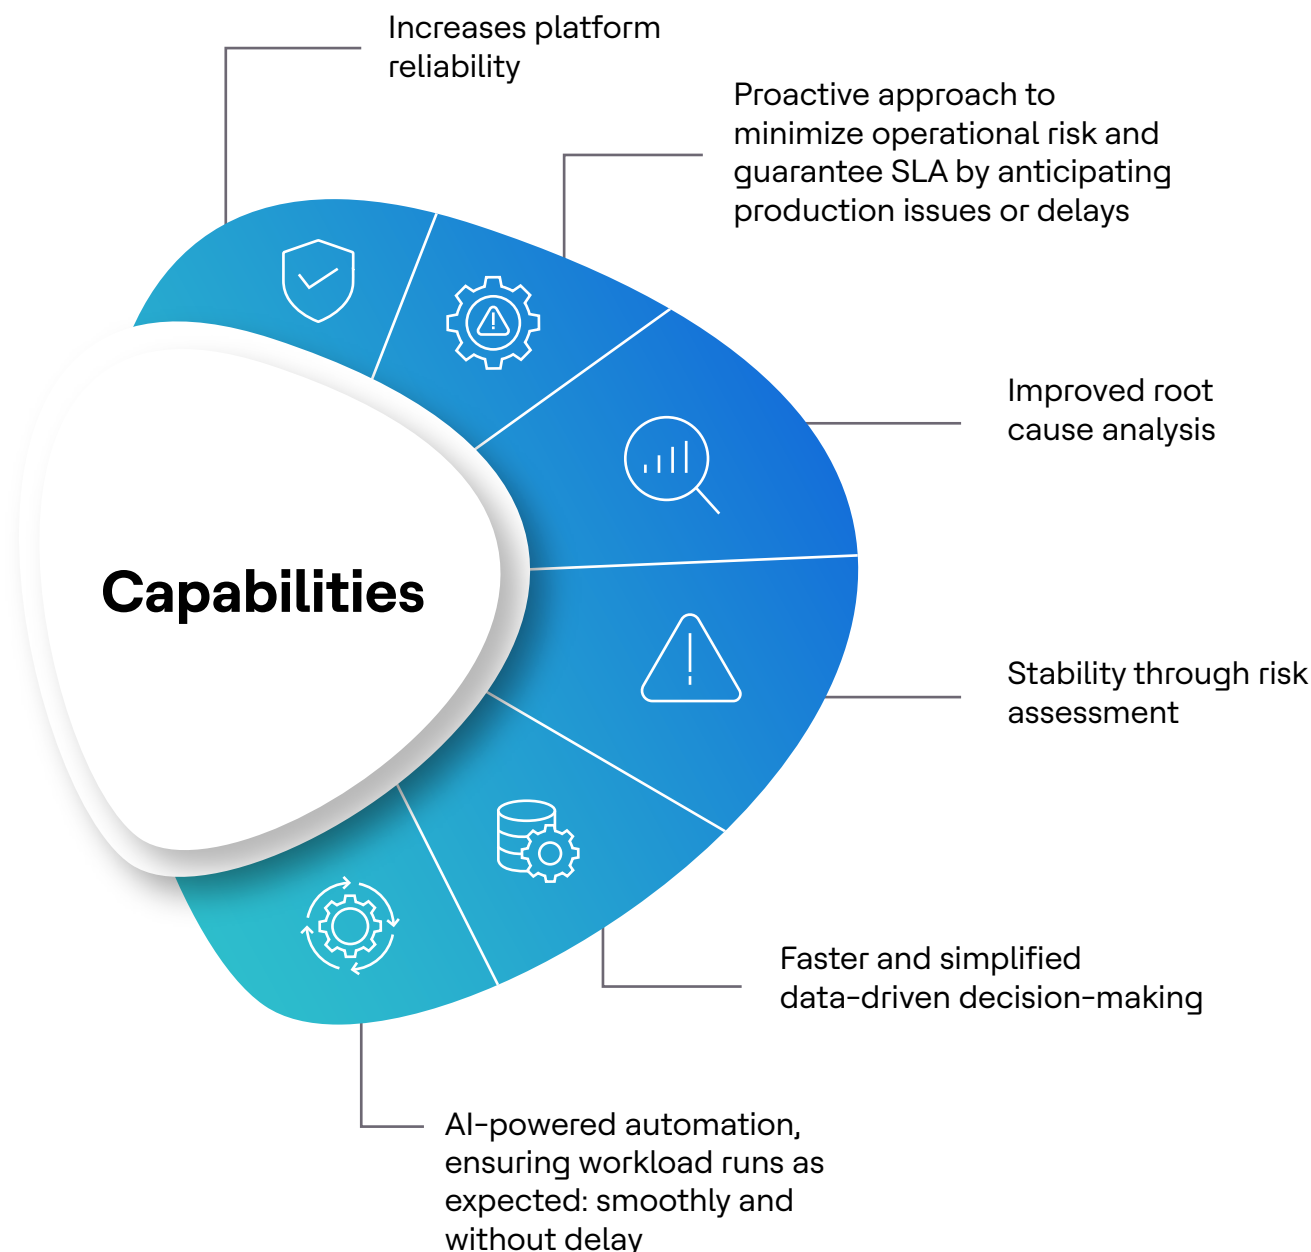

Overview

Transform your data-driven processes. Powered by state-of-the-art AI and ML techniques, we provide rapid and streamlined insights for intelligent workload management, empowering your organization to make smarter, informed decisions and drive transformative outcomes.

HCL AI Data Advisor leverages machine-learning techniques to identify patterns and anomalies in KPI trends (such as the number of completed tasks in the current plan, task duration and task end-time) and perform early detection of workflow execution issues by analyzing historical data and metrics gathered by Workload Automation and Workload Automation for Z.

The user can now see trends and warning signals on the workflow dashboard, but the system can send the same notification via email as per configuration.

HCL AI Data Advisor's anomaly detection and proactive notification system minimizes operational risk, empowering product administrators, lines of business administrators and operators.

About HCLSoftware

HCL Software is a division of HCL Technologies (HCL) that operates its primary software business.
